PROFILE

Financial and risk analyst with experience across private investment office support, real estate investment analysis, economic dispute consulting, banking operations and fintech-focused projects. Skilled in financial modelling, cash flow forecasting, IRR analysis, acquisition scenarios, liquidity structuring and risk assessment for residential and mixed-use investment projects. Background combines corporate finance, real estate exposure, regulatory awareness, digital asset markets, Python, data analysis and blockchain-based financial systems.

PROFESSIONAL EXPERIENCE

Finance & Risk Analyst (Real Estate Investments)

Online

Private Investment Office / HNW Clients (Confidential)

May 2025 – January 2026

- Built financial models for residential and mixed-use real estate projects to support investment decisions.
- Structured deal analysis including cash flow projections, IRR calculation, and acquisition scenarios.
- Assessed market positioning through comparables, rental benchmarks, and pricing dynamics.
- Developed risk frameworks for project and portfolio monitoring, including stress scenarios and downside cases.
- Supported capital allocation decisions by evaluating exit strategies under different macro and interest rate environments.

Consultant - Economic Disputes

Krasnodar, Russia

“Garant Pravo” Branch of the Regional Bar Association

September 2022 – August 2024

- Conducted financial analysis of contractual disputes involving funding structures, debt obligations, and corporate transactions.
- Assessed financial risk exposure and quantified potential losses to support litigation and arbitration strategies.
- Analysed financial documentation, capital flows, and compliance risks across commercial cases.
- Collaborated with external auditors and financial experts to prepare economic reports and evidentiary materials.
- Strengthened client positioning in negotiation and arbitration processes through structured financial argumentation.

Banking Intern

Krasnodar, Russia

JSC Bank “DOM.RF”

June 2023 – July 2023

- Assessed mortgage loan applications, analysing borrower income stability and credit capacity contributing to a 15% reduction in approval time.
- Contributed to internal reporting workflows tied to capital efficiency and short-term asset monitoring.
- Supported verification of financial transactions and documentation within retail banking operations.
- Assisted in compiling financial reports ensuring regulatory compliance and data accuracy.

EDUCATION

Middlesex University Dubai

Dubai, UAE

Master of Science in Financial Technology - completed with distinction

- Relevant modules: Financial Markets and Data Analytics for FinTech; Python, AI & Machine Learning Applications in Finance; Advanced Software Development for FinTech; Mathematics and Blockchain Technologies.

Henley Business School (University of Reading)

Reading, UK

Bachelor of Science in Finance (Investments)

- Relevant modules: Corporate Finance; Portfolio Management; FX and International Debt Markets; Management of Risk; Fintech and Cryptocurrencies; Financial Modelling;

Moscow State Institute of International Relations (MGIMO)

Moscow, Russia

Bachelor of International Finance and Investment Management

- Relevant modules: Statistics in Business; Quantitative Risk Assessment Methods; Sustainable Finance; Private Equity and Venture Capital; Derivative Securities Hedging and Trading

Completed two full bachelor's degrees in Finance through a joint international program between MGIMO University and the University of Reading.

PROJECTS

Dinero - Digital Asset Lending Model (Independent Project)

London, UK

Independent Project - Crypto-FinTech Startup, Regulatory Research, MVP Planning

Abu Dhabi, UAE

- Designed a crypto-collateralised lending framework incorporating dynamic LTV tiers, liquidity buffers, and risk-adjusted capital structuring mechanisms.
- Structured internal risk logic for collateral management, volatility thresholds, and capital preservation controls.
- Conducted regulatory analysis under the FCA (UK) and ADGM (UAE) frameworks, evaluating licensing pathways and compliance infrastructure requirements.
- Developed financial architecture for a minimum viable product focused on liquidity efficiency and risk containment.
- Initiated and conducted negotiations with potential strategic partners to structure mutually aligned cooperation frameworks in accordance with KYC/AML standards and regulatory oversight requirements.

Kintechs - Digital Asset Risk & Liquidity Intelligence (Independent Venture)

London, UK

B2B Risk Analytics Platform, Digital Asset Liquidity Monitoring

Dubai, UAE

- Built a Python-based risk engine calculating 1-day and 7-day parametric and historical VaR for BTC, ETH and stablecoin-denominated portfolios using rolling volatility windows and liquidity-adjusted return distributions.
- Developed a liquidity stress module estimating executable liquidation size under different market depth scenarios using order book imbalance ratios and average slippage modelling across major exchanges.
- Constructed stablecoin exposure diagnostics measuring reserve concentration, cross-chain supply fragmentation and exchange dependency risk across networks.
- Integrated multi-source API pipelines aggregating exchange netflows, ETF flows, realised volatility and funding rate data into a unified weekly risk dataset for scenario testing.
- Implemented counterparty exposure tracking logic mapping exchange allocation, custody distribution and hot-wallet concentration to quantify platform-specific operational risk.
- Produced institutional-style risk reports including drawdown decomposition, liquidity contraction scenarios and capital preservation thresholds aligned with treasury and risk committee decision frameworks.

SKILLS

Languages: English, Russian, French (Intermediate), Spanish (Intermediate Low), Arabic (Beginner).

Programming: R, Stata, GitHub, Python (SQLite, API integration, data analysis, regression and forecasting models, Machine Learning, blockchain analytics).
